## ***Tree Permit Approval Criteria (Summarized from Eugene Administrative Rule R-6.305-E, March 2000)***

Under the Eugene Code, a significant tree located on a private parcel may be removed only under certain circumstances, such as:

- 1) A report prepared by a certified arborist concludes that the tree is diseased or dying, or is creating an unsafe condition. Unsafe conditions can include such situations where a tree is endangering nearby structures, or interferes with utility services, sidewalks, or traffic.
- 2) Removal of significant tree(s) is necessary to construct improvements shown in an approved building permit.
- 3) The Fire Marshal issues a written determination that the tree(s) need to be removed in order to protect structures from fire danger.
- 4) Tree removal must also meet other approval criteria related to environmental impacts.

These criteria can be summarized as follows:

- The proposal meets or exceeds Oregon Department of Forestry guidelines for logging;
  - The methods of proposed removal and mitigation are compatible with generally accepted principles and practices of arboriculture, horticulture, silviculture, ecology and landscape architecture;
  - The proposal mitigates the environmental effects of tree removal through replanting of vegetation, or demonstrates why replanting is not possible or appropriate;
  - The proposal mitigates the effect the tree removal will have on the environmental quality of the area, including scenic and wildlife habitat values; and
  - The proposal mitigates the effect of tree removal on erosion, water bodies and streams, and nearby trees.
  - Only rubber tires vehicles may be used to remove trees, and no new logging roads are allowed; unless wooded areas along ridgelines are to be retained, and wooded areas along property lines would be retained as buffers.
- 5) Tree removal on large parcels with the potential for subdivision and additional development must meet additional criteria specified in the code.
